

PREPARING THE WORK

Files for us must meet following conditions:

- high resolution, best at 300 dpi or 600 dpi at most if bitmap of real quality image, but vectors, if possible, are most desired.
- mode of job colors must be - CMYK (not RGB or else)
- bleeds should have min. 3 - 6 mm on each side of artwork for most jobs, for brochures, books and catalogues with many pages these bleeds should be greater than 3 mm (please contact dtp staff for co-ordination).
- every page of the work should be sent in separate pdf page with bleeds, individually (not as spread pages), each artwork should be centered on its page
- the black texts / color should be overprinted (without choosing whites underneath) in some cases to make BLACK more deep without overprinting, on big surfaces we recommend to use following black recipe C:45% M:45% Y:0% K:100%, in case the black text is on red background with MY: 100%, use deeper black text with MYK: 100%
- dye cutting lines - (in jobs containing it) should be set as additional color (apart from CMYK) i.e. PANTONE and it should be overprinted.
- Check if texts, in your job, is in one color black
